

75 – 250 KW RENTAL GENERATOR FLEET @ EAGLE FORD, TX

PROJECT SUMMARY

POWER REQUIREMENT:

A prominent oil and gas E&P company needed a power supply for the continuous operation of over 30 oil wells in the remote Eagle Ford Shale Play in south Texas. They needed a mobile power solution that could withstand the rigors of an oil production operation in the extreme Texas climate. They also needed to ensure maximum uptime to keep the wells operational throughout the year.

SOLUTION:

Bryan Power met the client's challenge by delivering and installing over 30 towable diesel generator sets to multiple oil field leases throughout the Eagle Ford Play. These generators range in size from 75 – 250 kW and operate continuously to provide the prime power source for their extraction operations. These towable gensets provide the versatility and mobility their company needed to deploy this power solution to various locations.

RESULTS & BENEFITS

The project was such a success that the client continues to request new generators to power new oil well pad sites on multiple lease locations in the Eagle Ford. Here are just a few of the many benefits Bryan Power has provided the client:

- Continuous Primer Power Operation
- Full Service Maintenance Protection
- 24/7/365 Generator Outage Hotline
- Affordable, Scalable Power Solution
- Expert Power Industry Professionals endorsed by ISNetWorld – Certified Safety, Quality & Regulatory Compliant Vendor

Client

- EP Energy

Location

- Eagle Ford Shale Play, TX

Date

- July 2013 – October 2015

Equipment

- 75-250 kW Towable Diesel Generator Sets

Service

- Equipment Leasing
